DETAILED ACTION

Drawings

1. The specification describes a figure which is not present in the current application.

Applicant must submit a copy of the missing figure, this objection will not be held in abeyance.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 8 is rejected because it is unclear what is being claimed. Line 7 states "only the regions of the fancy yarn count as effect regions". What regions? As currently written, it appears that any/all regions count, which is confusing.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 8-13, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by Applicant's Specification.

Applicant's Specification teaches us that the use of such two-dimensional classifying matrices are well known in the art for visual display and counting of the regions of a yarn. Examiner notes that claim 12 seems to evidence that the class limits can be changed freely, which would seem to include any range imaginable. Likewise the lengths measured are inherent of the method, to avoid errors of a small sample size.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Eaton (20030037531), Lassman et al (5832709), Furter (6798506), and Pidoux et al (5537811) all teach what is well known in the art.
